**Description**

For now we use external smarty (.tpl) files with the full path for blocks.  
E.g. we use this parameter in install.xml for blocks:

```
<block filename="packages/directory/templates/common/file.tpl"> ... </block>
```

We need a functionality to specify the name of the file only while the core will generate correct path.  
For example, these variation should work:

```
<block filename="file.tpl"> ... </block>
```

```
<block filename="autos:file.tpl"> ... </block>
```

#### History

##### #1 - November 26, 2012 23:36 - Anonymous

- Status changed from New to Resolved
- Assignee set to Anonymous
- Target version set to 4.5.0
- % Done changed from 0 to 100

commit:027a5af9

Smarty plugins improved. All install.xml files of templates and packages rewritten for using improved external file functionality.

##### #2 - November 30, 2012 00:12 - Vasily Bezruchkin

- Subject changed from *Filename without full path to external tpl files for blocks* to *Filename without full path to external tpl files for blocks*
- Target version changed from 4.5.0 to 2.3.0
